

# SHACK IN A PI

LOREN ANDERSON, KEØHz

BARRY BROCK, KDØRQU

# What is a Shack in a (Raspberry) Pi?

- Pretty much any application you need to computerize your ham shack
  - Rig Control, Digital Modes, SDRs, logging, satellite tracking
  - Tools and calculators
- You can take it into the field with you
- Remote ops (VNC)
- HotSpot capability
- Inexpensive

# Multiple Options

- Build your own
  - Raspbian Pi OS plus lots of open source software available
  - You're on your own but lots of YouTube videos
- HamPi
  - Created by Dave Slotter, W3DJS
  - <https://github.com/dslotter/HamPi> or find it at <https://forums.qrz.com/index.php?threads/w3djs-raspberry-pi-ham-radio-image-v2-0-released.680336/>
- Build-a-Pi (KM4ACK pi-build)
  - Created by Jason Oleman, KM4ACK
  - <https://github.com/km4ack/pi-build>
  - Instructional YouTube videos at [https://www.youtube.com/channel/UCSQhXfGo\\_68Ta8-2wStAWkw](https://www.youtube.com/channel/UCSQhXfGo_68Ta8-2wStAWkw)

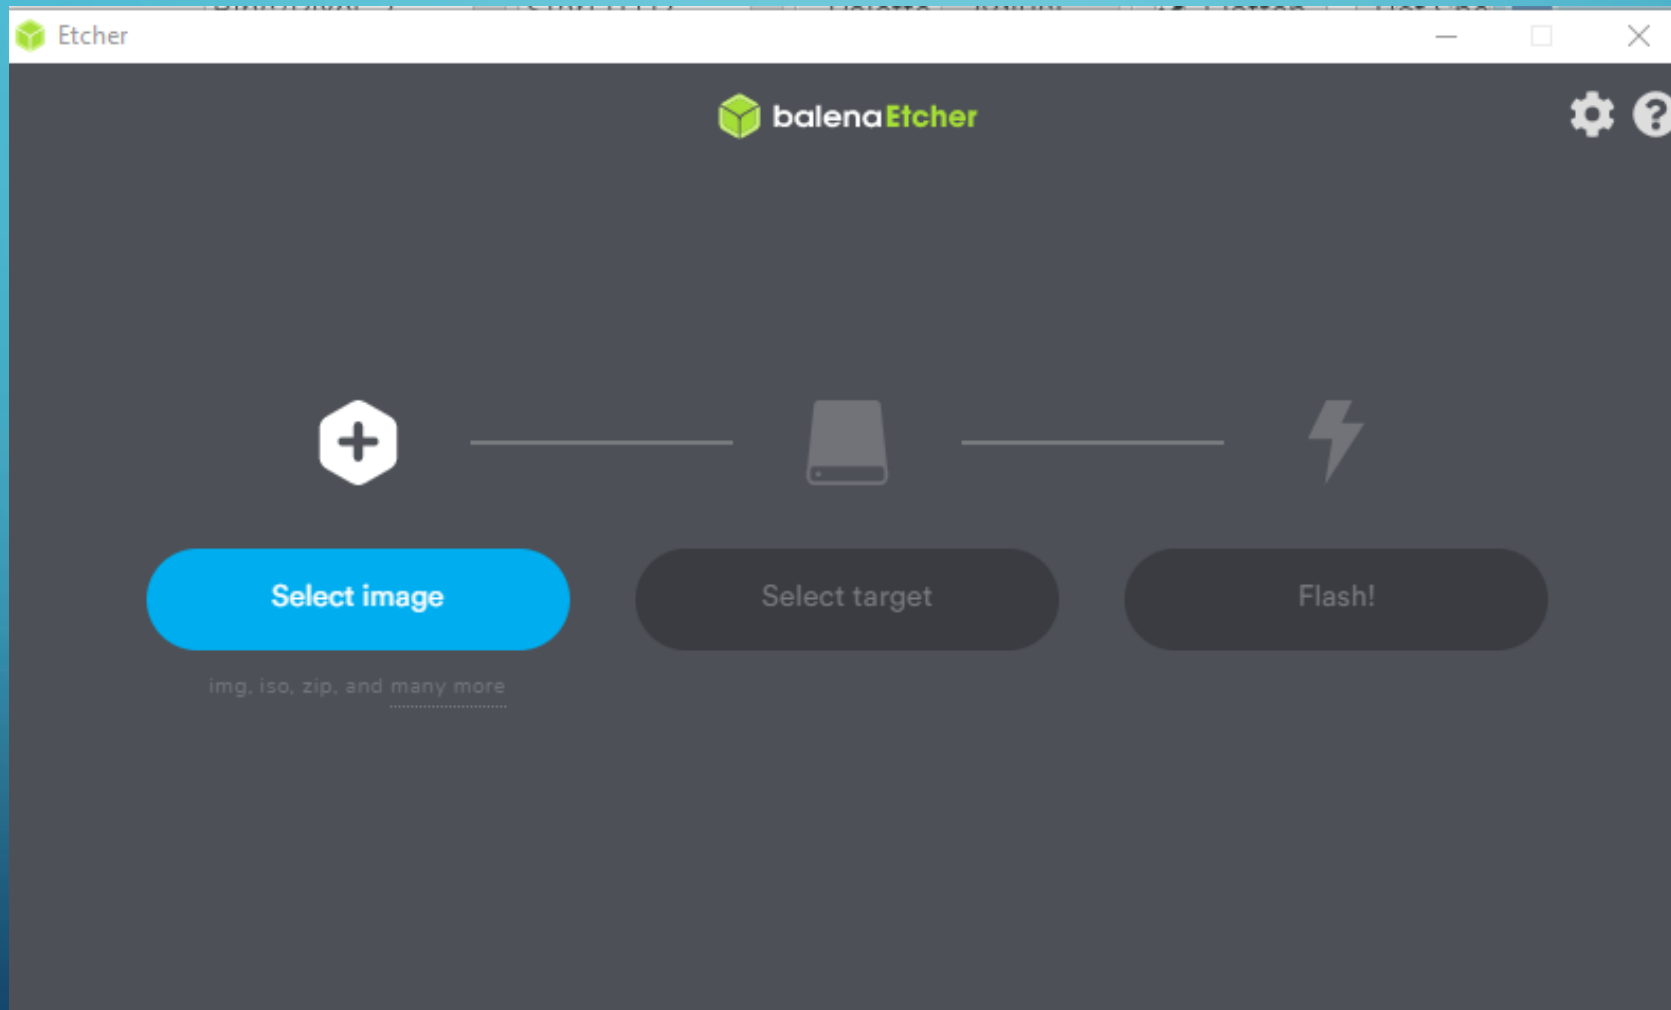

# WHAT IS HamPi

- Raspberry Pi image that has preloaded pretty much any application you might need in your ham shack
- Based on Raspbian Buster
- Runs on Raspberry Pi 3 or 4 (may run on 2 but performance will suffer on some apps)
- Simple configuration

# HAMPI: WHAT DO YOU NEED?

- Raspberry Pi 3B or 4B
- SD Card – 16GB or larger (32GB recommended)
- Power Source (USB 3.0)
- Keyboard (USB), Mouse(USB), Monitor (microHDMI) (temporary)
- WiFi or Ethernet connection
- Optional – Audio Interface from Rig (analog or digital (Signalink)), SDR dongle

# LOAD HamPi TO SD CARD

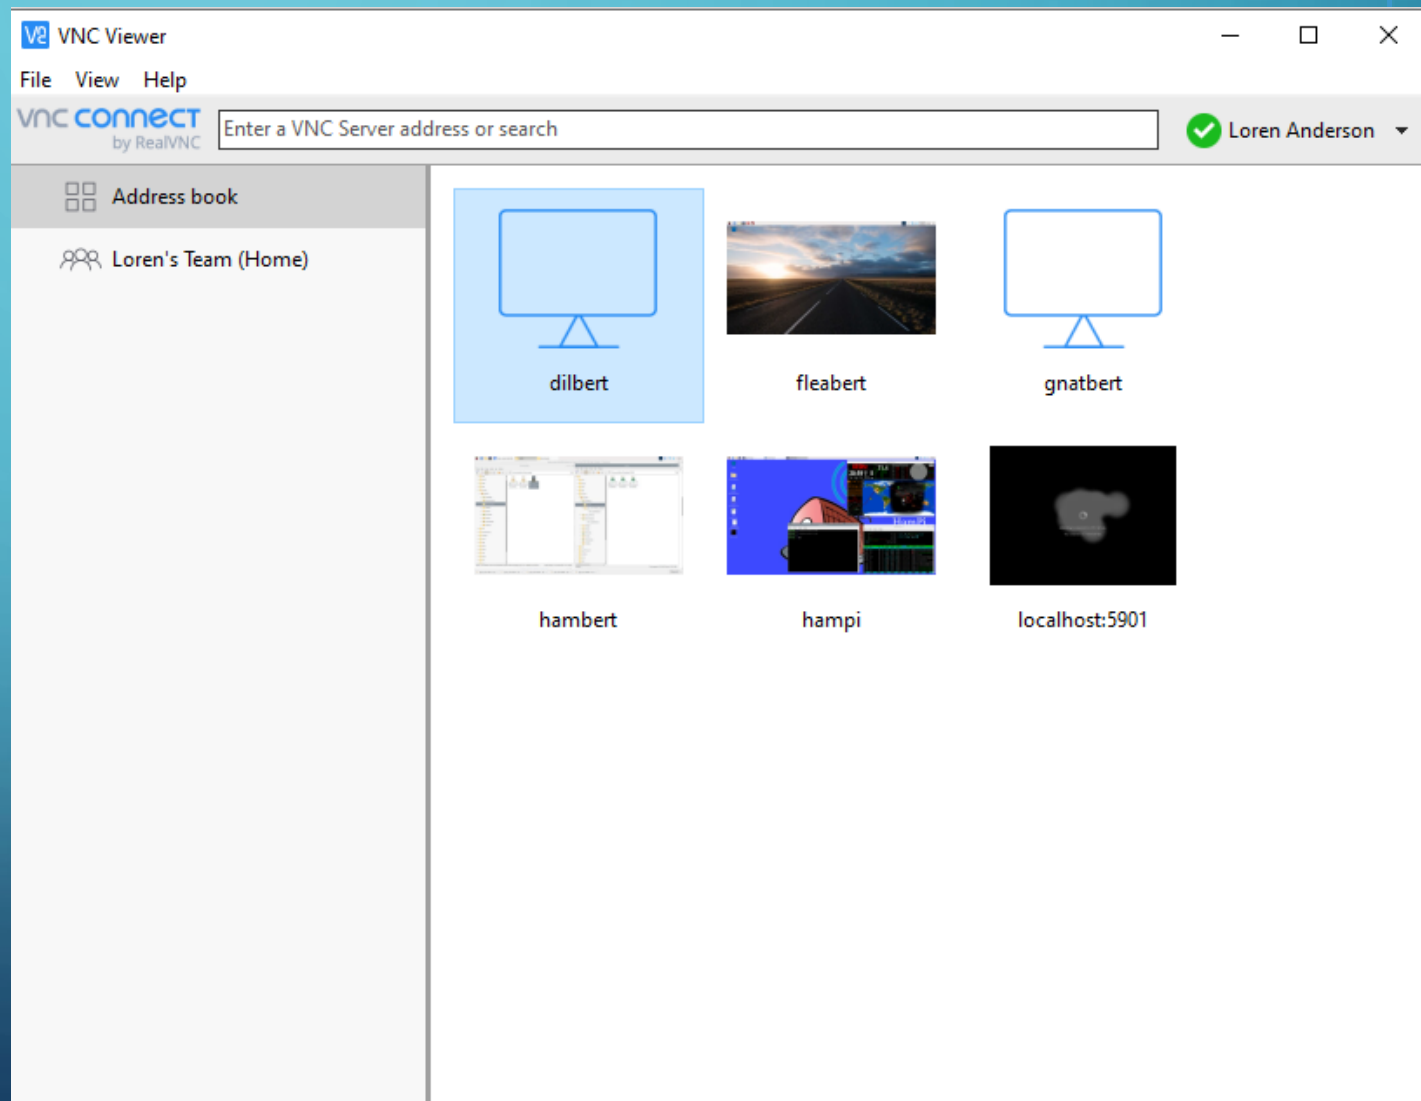

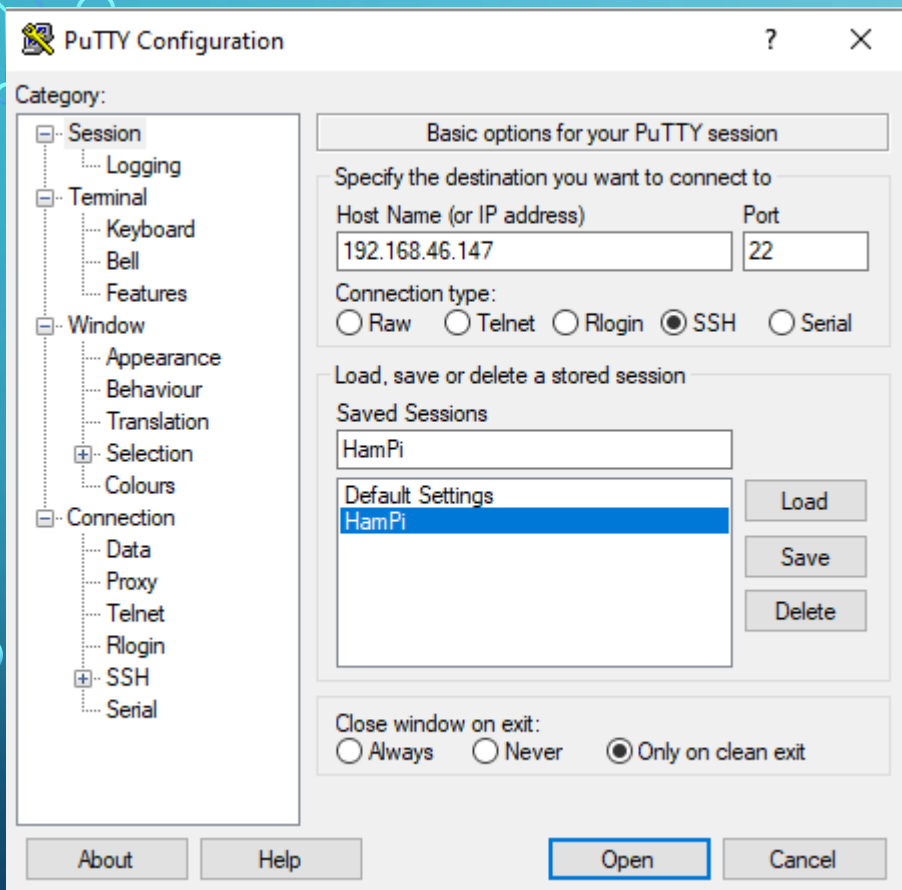

# WHAT DID YOU MEAN “TEMPORARY”

- Keyboard, mouse, and display helpful when you first run setup
- With Putty you can run the Pi in Command Line from another computer on the network (Pi is “headless”)
  - <https://www.putty.org/>
- With VNCViewer (RealVNC) you can control Pi’s desktop from any computer on your network or off the network (via Internet)
  - <https://www.realvnc.com/en/connect/download/viewer/>

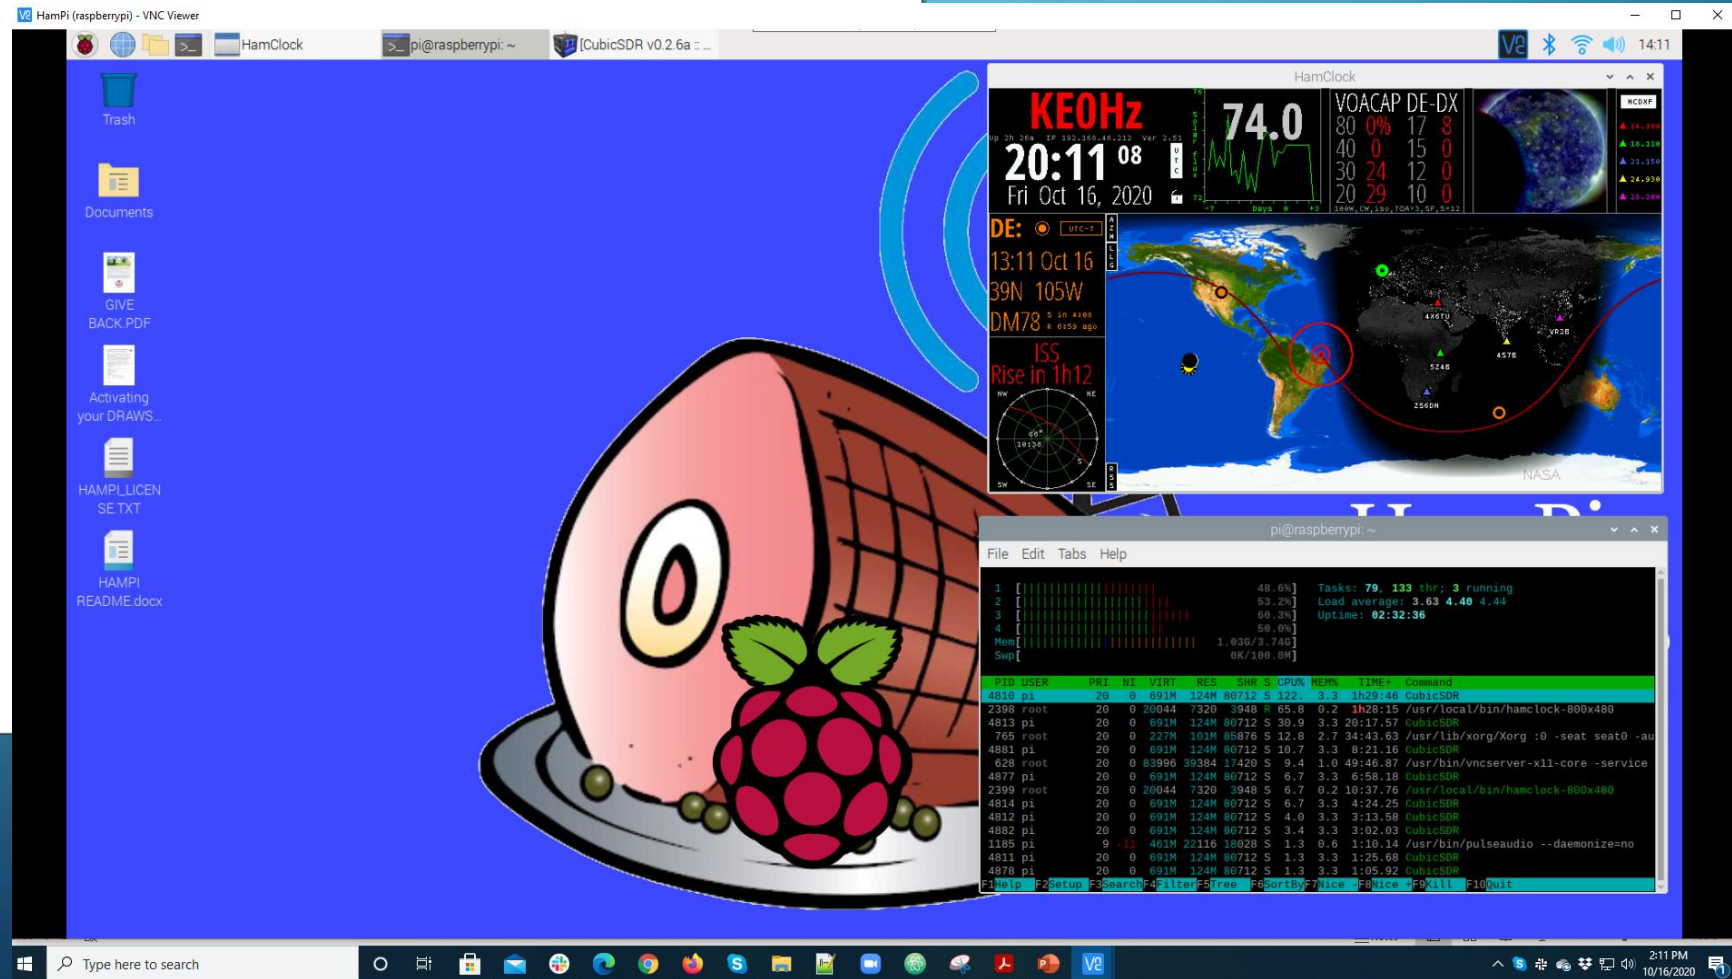

# HEADLESS CONNECTION

## VNC Viewer opens interactive display on remote desktop

# KEØHZ

- Raspberry Pi 4B
- RTL-SDR dongle
- Yaesu FT-DX3000
- CAT Cable for Rig Control
- Signalink – if connected to FT-817
- Note: No keyboard, mouse or display connections for Pi. Display above is using VNC Viewer.

HamPi  
by W3DJS

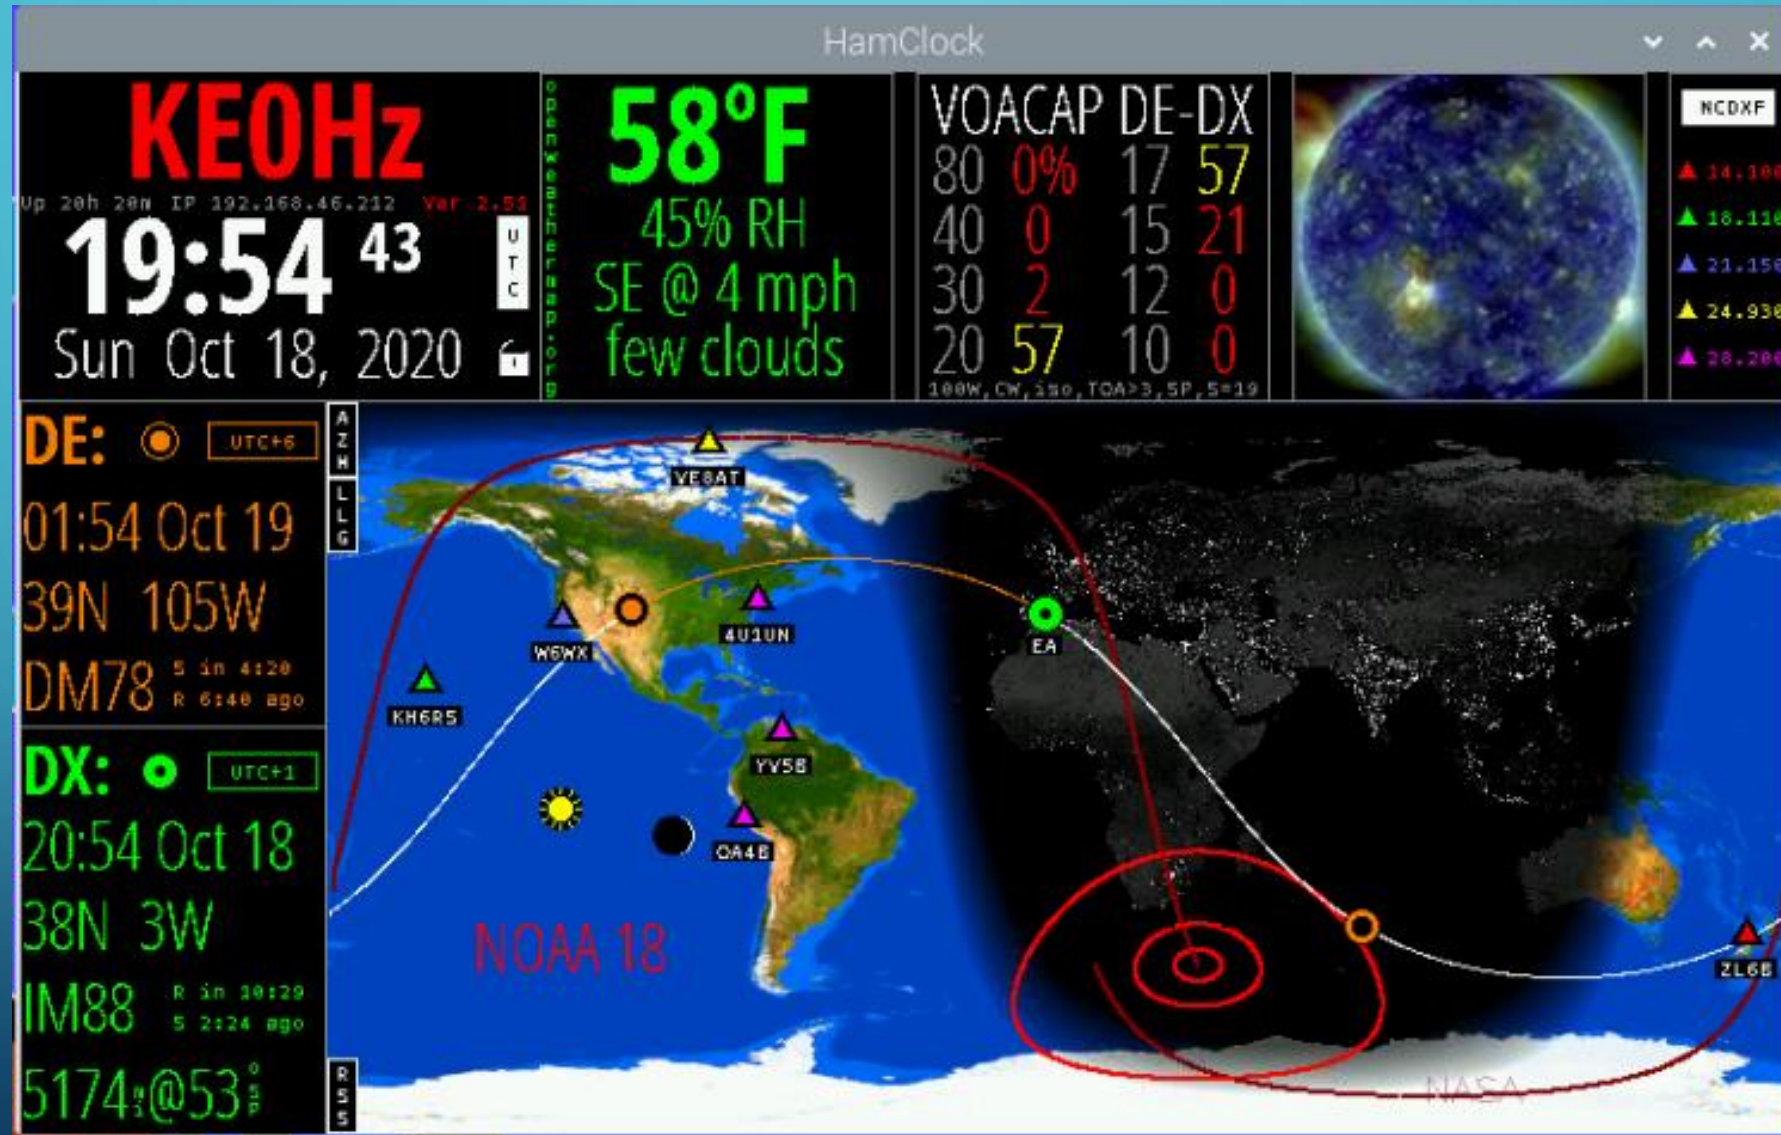

# HamPi APPLICATIONS

- Operating – Digital Modes (WSJT-X, JS8Call, PSK, WSPR), SDRs, ADS-B, HamFAX, DX Clusters, EchoLink, WinLink, APRS, SSTV
- Operating Tools – Satellite Tracking, DMR, Rig Control Libraries (flrig, HamLib), GridTracker
- Shack Management – Logging, Clocks, GPS
- Calculator/Design Tools – Antenna modeling, Smith charts, Propagation
- Morse Code – CW practice, CW decoding, eBooks to CW

# HAMCLOCK

# KEØHZ HAMPI DEMO

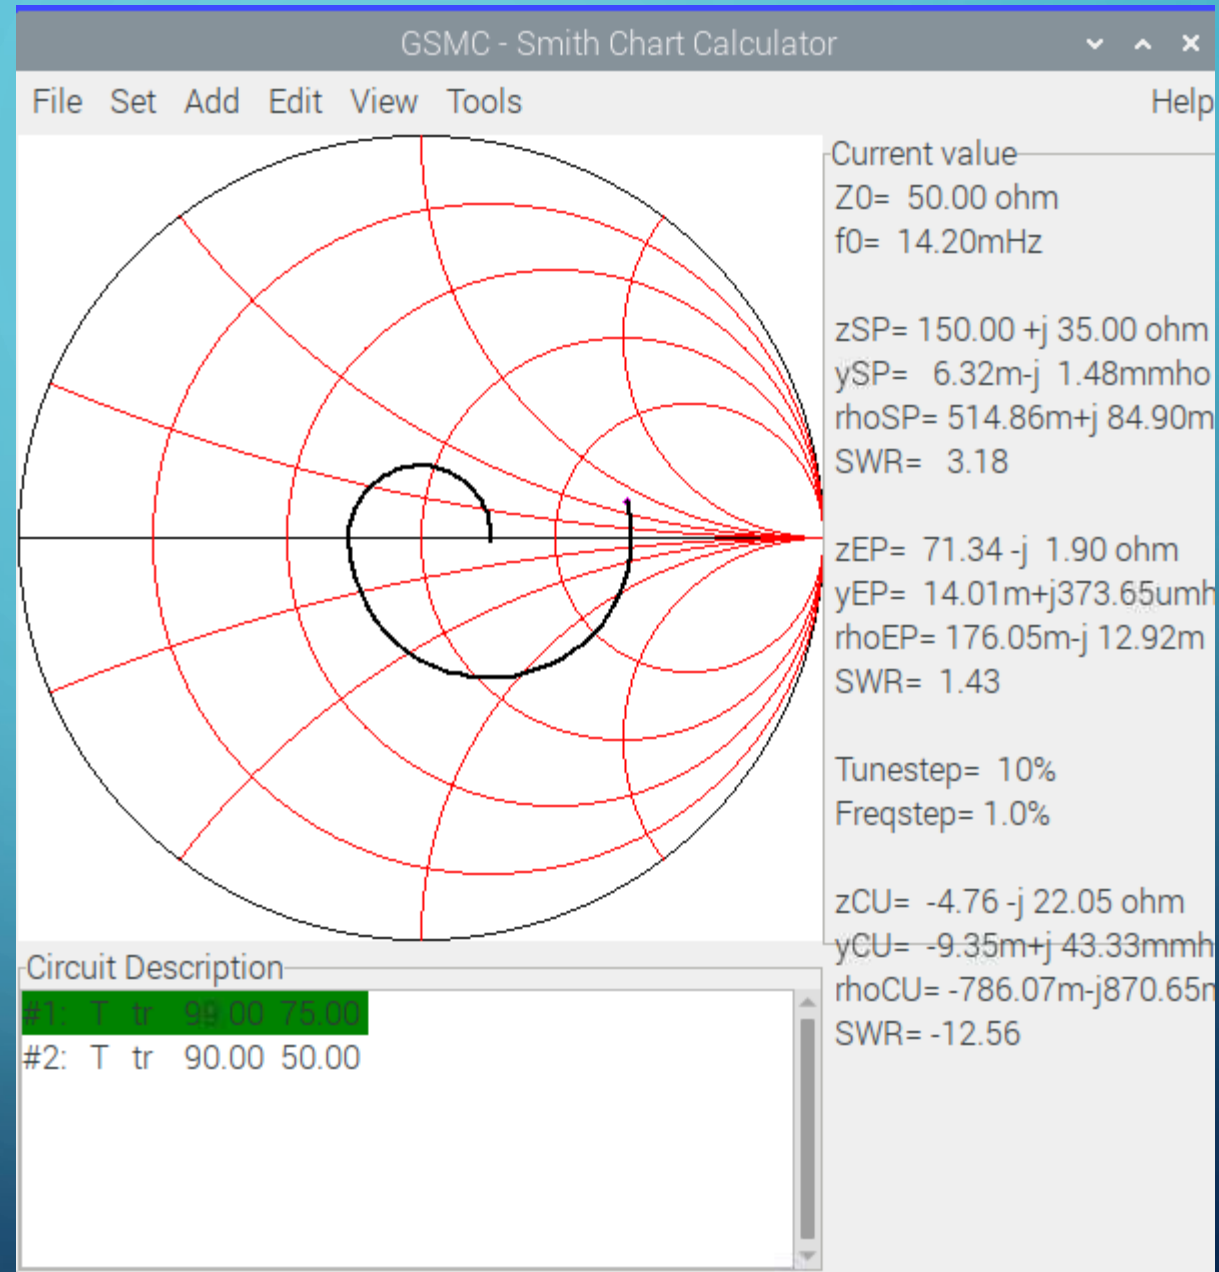

- HamClock
- GTK Smith Chart Calculator
- FLdigi
- FLcluster
- xcwcp Morse Code Trainer
- Ham Exam
- CubicSDR

# SMITH CHART CALCULATOR

Transform antenna impedance  
 $150 + j35$  to near 50 ohms  
SWR = 3.18

75 ohm coax, 99 degree length  
(a bit over 1/4 wavelength)  
plus  
50 ohm coax, 90 degree length  
(1/4 wavelength)

Transforms impedance to  
 $71.34 + j0$   
SWR = 1.43  
at transmitter output

# FLDIGI

fldigi ver4.1.14 / Hamlib FT-DX3000 - KE0HZ

# MORSE CODE TRAINER — XCWCP

# TRAINING: HAM EXAM

```
hamexam
File Edit Tabs Help
usage: hamexam {t|g|e|q}
hamexam version 1.6.0
Technician, Element 2 effective July-2018 until July-2022
General, Element 3 effective July-2015 until July-2019
Extra, Element 4 effective July-2016 until July-2020
hamexam is an interactive study guide for USA FCC amateur radio (ham radio) examinations.
The 3 question pools are:
    t element 2, Technician Class (entry level),
    g element 3, General Class (also requires element 2),
    e element 4, Extra Class (also requires elements 2 and 3).
Questions are chosen randomly from the selected pool.
Incorrect answers cause the question to be asked again later.
Licenses are issued by the FCC, but exams are conducted by Volunteer Examiners.
For more information about USA amateur radio licensing: http://www.arrl.org/licensing-preparation-exams
Which pool? {t,g,e}: g
resuming remaining questions
458 questions remain in this pool

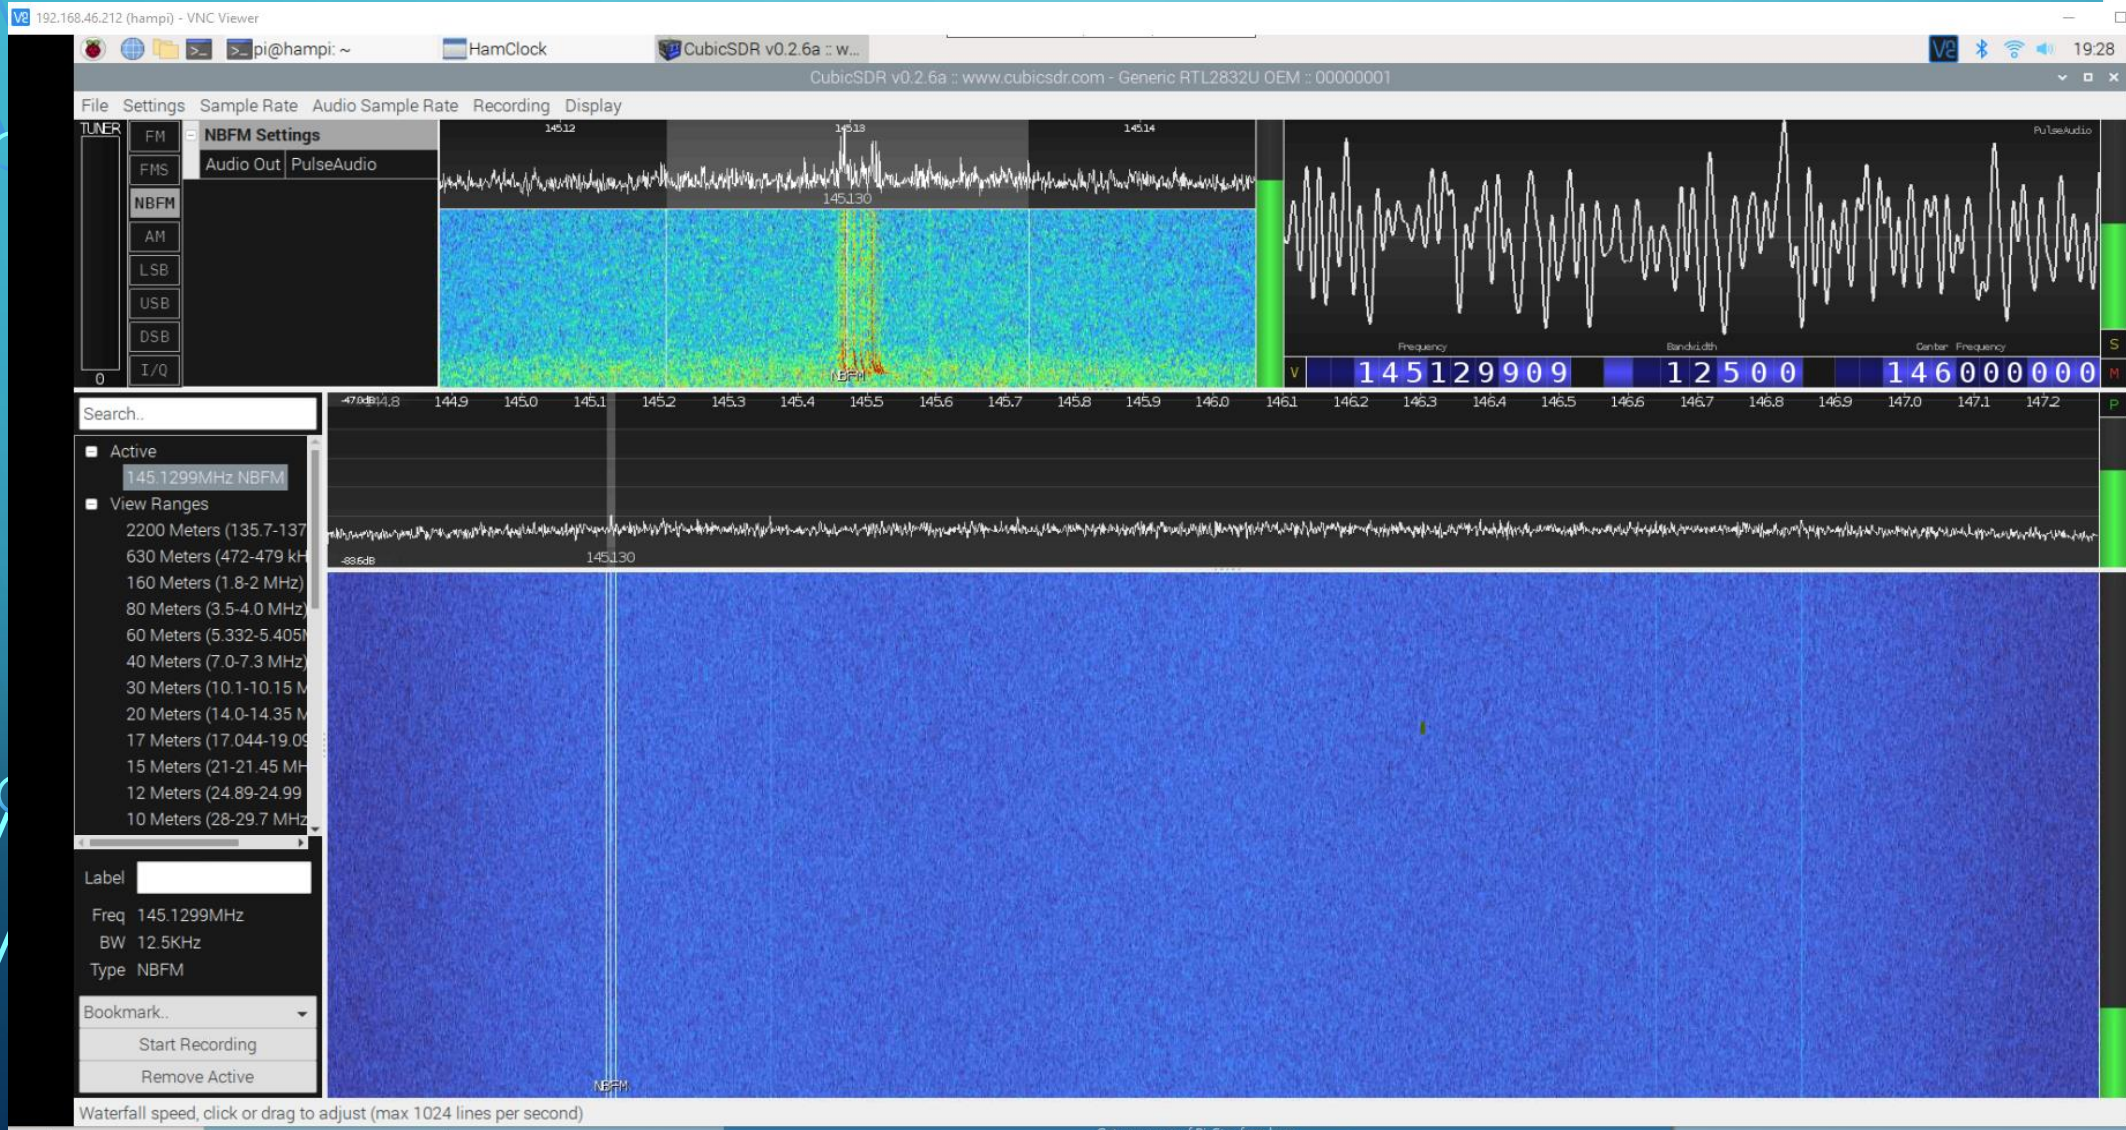

What is the output PEP of an unmodulated carrier if an average reading wattmeter connected to the transmitter output indicates 1060 watts?
A. 530 watts
B. 1060 watts
C. 1500 watts
D. 2120 watts
b
.....correct

Which of the following is an advantage of using a Schottky diode in an RF switching circuit rather than a standard silicon diode?
A. Lower capacitance
B. Lower inductance
C. Longer switching times
D. Higher breakdown voltage
a
.....correct

What is a possible benefit to radio communications resulting from periods of high geomagnetic activity?
A. Auroras that can reflect VHF signals
B. Higher signal strength for HF signals passing through the polar regions
C. Improved HF long path propagation
D. Reduced long delayed echoes
■

# About Build A Pi

- **The KM4ACK website is well maintained and Jason puts out a new video and News letter once a week**
- **Maintains a active forum or user group with a good following.**
- **Jason looks for input from other HAM's for programs to add and has a group of "Beta" testers to help him with the latest update or build.**
- **Jason often field tests his Pi and reports his success or failures.**
- **Build a Pi is designed for in the field portable use and primary focus is on emergency comms.**

# KM4ACK Goals

- To provide a usable platform for digital modes in the field.
- Pat Winlink – Gives us HF and VHF E-Mail
- APRS – Position Reports, text messaging
- Digital Modes – FLDIGI, JS8Call - for E-comms
- FT8 - for play.
- Jason: “My hometown experience a [tornado outbreak](#) on Good Friday 2009. We lost cell service and power for several days. Because of that experience, my primary focus is on emergency comms. Most everything I do is slanted that direction.”

# **The Build**

- **You can select what software you want to install.**
- **During install you supply some basic information and Build a Pi will configure most programs for you. This is big deal and keeps you out of Linux.**
- **Sound card and radio will need to be configured.**
- **Jason puts out excellent how-to videos to walk you though the process.**

# **The Build Continued**

- **Image will take a while to load (Up to 4 hours) depending on model of Pi and what you choose to install. However you can start the download and walk away.**
- **Programs are easily up-dated.**
- **Build a Pi is easily upgradable to different versions.**
- **Build a Pi has an auto Hot Spot if the main Wi-Fi SSID is lost or not available.**

**Hot spot is used with VNC for portable use.**

# KD0RQU

- Yaesu FT-857D
- LDG Auto Tuner (Z100 Plus)
- Signalink – For PTT
- Pi 4
- GPS Dongle
- CAT Cable for Rig Control
- Data Cable
- Spider Beam push up pole 40'
- Antenna: 9:1 Unun with 36' wire (while portable)
- Rig Runner 4004U – For Power distribution.
- 10.5 or 23.5 Dakota 12 volt lithium battery

# Winlink

- **Winlink is a software bridge that links Packet Radio from the 1980's to the Internet of today.**
- **Pat Winlink is the Raspberry Pi's version of Winlink and is a slimmed down version used on the Pi.**
- **You will need to register with Winlink to use Pat Winlink.**
- **Pat Winlink is one of the main programs used in this build so registering is a must.**

**<https://www.winlink.org>**

# What is Winlink?

In it's simplest terms:

“A World-Wide System for  
Transferring Email  
via Radio.”

# Some of the Many Users:

## Amateur Radio (Hams)

## Emergency Communications

Local, State, National, International

## Governments & Auxiliary Agencies

Regional, National, International

# Maritime / Search & Rescue

## Sea Going World Wide

FEMA

American Red Cross

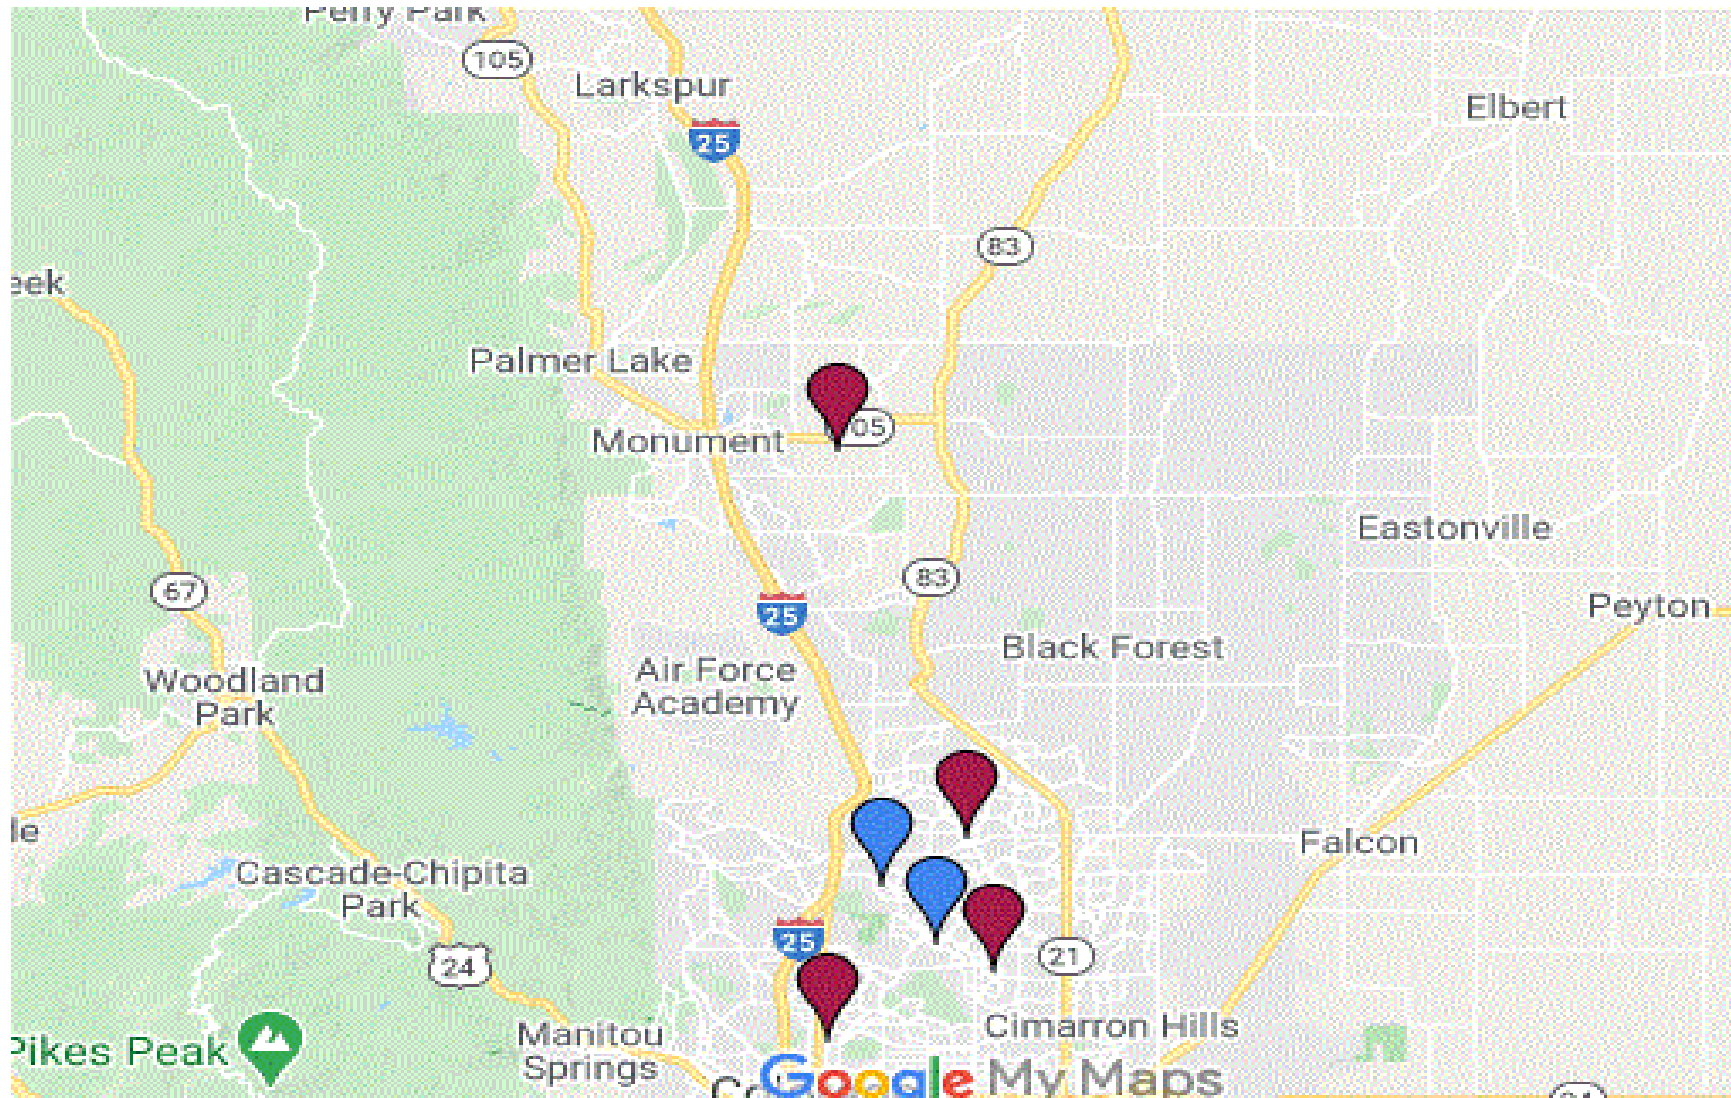

## Winlink Email Transfer Paths:

# KE0GB-10

## Richard Hendricks Sr.

# Demo:

- **Build A Pi – GUI**
- **Pat Menu – Show interface**
- **Ardop - HF Modem**
- **Direwolf - Packet TNC (VHF)**

## Send Packet e-mail by Packet

- **FLDIG - Narrow Band Emergency Messaging Software (NBEMS)**
- **JS8Call – Quick Overview.**
- **WSJTX – FT8 - Quick Overview**
- **Grid Tracker – Overlays, Call roster, PSK**

# Install

**The install is a two part process:**

- 1. Download and flash Raspbian buster to SD card and run the setup.**
- 2. On Jason's github page you will find a video on the install process.**

**On this same page you will find a list of programs with a brief description that can be installed.**

**<https://github.com/km4ack/pi-build>**

# **Install Continued**

- **Whereas Build A Pi configures a lot of stuff for you, there will be some configuration left to do.**
- **Jason puts out excellent how-to videos to walk you through the process.**

**Card Reader**

[https://www.amazon.com/gp/product/B06ZYXR7DL/ref=ppx\\_yo\\_dt\\_b\\_asin\\_title\\_o09\\_s00?ie=UTF8&psc=1](https://www.amazon.com/gp/product/B06ZYXR7DL/ref=ppx_yo_dt_b_asin_title_o09_s00?ie=UTF8&psc=1)

- **While putting this presentation together I did some snooping on Jason's website. Boy, did I find a ton of stuff that I've missed. Grab a cup of coffee, sit back and do some snooping yourself. Interesting stuff!!**
- **<https://app.simplenote.com/publish/C3bBxN>**

## MISC ACCESSORIES

- **VNC – Allows you to connect to any device by Wi-Fi to display user interface. You can connect to multiple devices at the same time.**

**Not being “Tied” to your radio with cables etc. is a really big deal.**

- **Real Time Clock – FT8 and JS8Call require accurate time to run correctly.**
- **GPS Dongle will give you accurate time as well plus your GPS coordinates.**
- **Card Reader – Used for Back-up**

# FINAL OBSERVATIONS

- HamPi has greater variety of applications
- HamPi is easier to get started, but....
  - No options – you get what you get
  - Contains some "bloatware"
  - Forces BOINC upon you
- Build-a-Pi tailorable to your needs
  - Better suited for portable operations
- Build-a-Pi better online YouTube support videos

# COMPARISON OF APPLICATIONS

## General Ham Radio Applications

### **HamLib - Ham Radio Control Libraries (HamPi & Build-a-Pi)**

grig - graphical user interface to the Ham Radio Control Libraries (HamPi)

### **CHIRP - Radio Programming Software**

### **APRS Message App for JS8Call - GUI to send APRS messages via JS8Call**

QTel - EchoLink client

### **QSSTV - Slow Scan TV (e.g. "Fax")**

### **Gpredict - Satellite prediction**

FreeDV - Free digital voice vocoder

BlueDV - Client for D-Star and DMR

WsprryPi - WSPR software

ADS-B Flight Tracking Software

Pi3/4 Stats Monitor - by W1HKJ

### **VOACAP - HF propagation prediction**

### **GPS Support**

### **Auto WiFi Hotspot - Automatically turn your Pi into a WiFi hotspot when in the field!**

wxtoimg - NOAA weather imaging software

### **twHamQTH - an online callsign look up program**

twclock - a world clock and automatic ID for amateur radio operators

acfax - Receive faxes using your radio and sound card

colrconv - converts client with sound and ncurses color support

d-rats - A communication tool for D-STAR

fbf - Packet radio mailbox and utilities

gcb - Utility to calculate long and short path to a location

glfer - Spectrogram display and QRSS keyer

Xdx is a DX-cluster client

DXSpider - DX Cluster Server

fccexam - Study tool for USA FCC commercial radio license exams.

gnuais / gnuaisgui - GNU Automatic Identification System receiver

hamexam - Study guide for USA FCC amateur radio (ham radio) license examinations.

hamfax - Qt based shortwave fax

inspectrum - tool for visualising captured radio signals

**predict-gsat - Graphical Predict client**

splat - analyze point-to-point terrestrial RF communication links

wwl - Calculates distance and azimuth between two Maidenhead locators

## Antenna Related Applications

antennavis - Antenna Visualization Software

gsmc - A GTK Smith Chart Calculator for RF impedance matching

nec2c - Translation of the NEC2 FORTRAN source code to the C language

xnecview - NEC structure and gain pattern viewer

yagiuda - software to analyse performance of Yagi-Uda antennas

## Digital Mode Ham Radio Applications

WSJT-X - Weak Signal (FT8, FT4, etc.) by W1JT

**GridTracker - Graphical mapping companion program for WSJT-X or JTDX**

**JTDX - Alternate client for Weak Signal (FT8, FT4, etc.)**

**JS8Call - Messaging built on top of FT8 protocol by KN4CRD**

**JS8CallTools - Get Grid coordinates using GPS**

**(FLDigi is in its own section below.)**

gnss-sdr - GLONASS satellite system Software Defined Receiver

linpsk - amateur radio PSK31/RTTY program via soundcard

multimon - multimon - program to decode radio transmissions

multimon-ng - digital radio transmission decoder

psk31x - a terminal based ncurses program for psk31

twpsk - a psk program

## Software Defined Radio

CubicSDR - Software Defined Radio receiver

cutesdr - Simple demodulation and spectrum display program

GQRX - Software defined radio receiver

SDRAngel - SDR player

lysdr - Simple software-defined radio

quisk - Software Defined Radio (SDR)

SoapyAudio - Soapy SDR plugin for Audio devices

SoapyHackRF - SoapySDR HackRF module

SoapyMultiSDR - Multi-device support module for SoapySDR

SoapyNetSDR - Soapy SDR module for NetSDR protocol

SoapyRemote - Use any Soapy SDR remotely

SoapyRTLSDR - Soapy SDR module for RTL SDR USB dongle

SoapySDR - Vendor and platform neutral SDR support library

SoapySDRPlay - Soapy SDR module for SDRPlay

Support for RTL-SDR

Support for SDRPlay SDR

Support for HackRF SDR

## APRS Applications

**Xastir - APRS GUI client / Digipeater / Igate**

**YAAC - Yet Another APRS Client**

**DireWolf - Software "soundcard" AX.25 packet modem/TNC and APRS encoder/decoder**

aprsdigi - digipeater for APRS

aprx - APRS Digipeater and iGate

soundmodem - Sound Card Amateur Packet Radio Modems

## **FLDigi Application Suite from W1HKJ**

flrig - Rig Control program which interfaces with fldigi

**fldigi - Digital Modes Communications**

flaa - RigExpert Antenna Analyzer Control Program

**flamp - File transmissions via Amateur Multicast Protocol**

**flarq - ARQ data transfer utility for fldigi**

flcluster - Telnet client to remote DX Cluster Servers

fllog - Logbook application which can use same data file as fldigi

**flmsg - Editor for ICS 213 Forms**

flnet - Net Control Assistant for Net Activities (Check-In Application)

flpost - NBEMs post office

**flwrap - File encapsulation and compression for transmission over amateur radio**

flwkey - Winkeyer (or clone) control program for K1EL Winkeyer series

## Logging Applications

TrustedQSL - LotW client

**CQRlog - Ham Radio Logging Application**

**PyQSO - Logging software (written in Python)**

klog - The Ham Radio Logging program

tlf - console based ham radio contest logger

tucnak2 - VHF/UHF/SHF Hamradio contest log  
version 2

twlog - basic logging program for ham radio

wsjtx\_to\_n3fjp - Logging adapter to allow WSJT-X to log to N3FJP

xlog - GTK+ Logging program for Hamradio  
Operators

## WinLink Applications

**Pat WinLink - WinLink for Raspberry Pi (and other platforms)**

**ARDOP support for Pat WinLink**

**ARDOP-GUI - Provides graphical representation of ARDOP connections**

**Find ARDOP - Retrieves local ARDOP sources by KM4ACK**

**AX25 support for Pat WinLink**

PMON - a PACTOR® Monitoring Utility for Linux

## Morse Code Applications

aldo - Morse code training program

cw - sound characters as Morse code on the soundcard or console speaker

cwcp - Text based Morse tutor program

xcwcp - Graphical Morse tutor program

cwdaemon - morse daemon for the serial or parallel port

ebook2cw - convert ebooks to Morse MP3s/OGGs

ebook2cwgui - GUI for ebook2cw

morse - training program about morse-code for aspiring radio hams

morse2ascii - tool for decoding the morse codes from a PCM WAV file

morsegen - convert file to ASCII morse code

qrq - High speed Morse telegraphy trainer

twcw - sends morse code via the sound card or serial card (Needs RTC installed)

xdemorse - decode Morse signals to text

rscw - Receive CW through Soundcard

**\*\*\* Ham Radio Wallpaper also included in image \*\*\***
